Abstract (en)

[origin: EP0351286A2] This concerns the disposition between floor and ceiling, of any space divider panel to be erected vertically by pivoting about its foot. According to the invention, there are provided, at the upper part of this space divider panel, a fixation means (25) comprising a sole-plate (26), via which it is adapted to be fixed to the ceiling, and a wing (28) which is capable of moving from a first, stand-by position, in which it extends substantially in the extension of the sole-plate (26), to a second, use position, in which, duly fastened with respect to this sole-plate (26), it extends substantially at right angles with respect to the latter and is thus capable of providing a support for the space divider panel in question, this wing (28) being equipped for this purpose with at least one entrainment tongue (29) interposed on the journey of the said panel. Application, in particular, to composite space divider panels. <IMAGE>
