Abstract (en)
[origin: EP0351298A2] This binding aims to provide a binding which makes it possible to adjust the position of the feet of the athlete both in terms of spacing and rotation and to permit slight elastic movements of the boot relative to the monoski. To this end, the base plate (2), comprising the means (4, 5) for holding the boot, is fixed elastically in an adjustable manner to a flexible plate (1) which is itself fixed to the monoski. <IMAGE>
