Abstract (en)  
[origin: EP0351306A2] The cylindrical mill comprises one or more grinding rollers (15) arranged radially inside the rotary drum (1) and accompanied with displacement means such that they are displaced along the annular guide (4) in the material to be ground during the rotation of the drum (1). According to the invention, each annular guide (4) is surrounded by annular lifting zones (7), in which zones rings (8) provided with equidistant and inclined blades (9) are fixed to the inner wall of the drum (1). <IMAGE>
