Abstract (en)
[origin: EP0351368A1] The overflow pipe consists of an outer pipe part (1) having a valve disc (2) at the free end and an inner pipe part (3) having an eye (4) for fastening the valve actuation means. The two pipe parts (1, 3) are telescopically adjustable, a lip ring (9) sealing the two parts watertightly relative to one another. For axial fixing, the outer pipe part (3) has on its inner side (10) projections (11) which each engage in one of a plurality of transverse grooves (13) in the circumferential surface (5) of the inner pipe part (3). <IMAGE>
