Abstract (en)
[origin: EP0351396A2] An inner shoe (1) for a ski boot consists of a support material (2) and a foam layer (3). This has local recesses (6, 7) which, not including the sole region, extend over at least 30% of the inner shoe surface, at least, on the one hand, one ankle recess (6), which in its dimensions corresponds at least to the field described by the movement of the ankle, being provided in the ankle region, and, on the other hand, one instep recess (7) being provided in the region of the tarsal bone. <IMAGE>
