Abstract (en)  
[origin: EP0352038A2] The apparatus strips sheathing (20b) from wire (20) (see Fig. 3) at controllable depth and includes a frame (10), wire clamp mechanism (24) on the frame for sidewardly clamping the wire sheathing at a location spaced from the end of the wire advanced past the clamp mechanism (24), a carriage (16) on the frame linearly movable longitudinally toward and away from the wire clamp mechanism (24), a rotating spindle (100) on the carriage, blades (63, 64) (Fig. 6) on the spindle and rotatable thereby to rotatably cut into the wire sheathing (20b) at a location proximate the guide, a wire engaging guide (62) mounted on the carriage (16) independently of the spindle (100) for sidewardly engaging the wire sheathing (20b) at a location between the clamp mechanism (24) and the blades (63, 64), cam means (115) on the spindle co-operable with levers (110, 111) to control the depth of cutting of the blade or blades into the sheathing (20b), and as the spindle (100) rotates, and a drive (55, 56, 57) operatively connected with the carriage to carry the blades (63, 64) to selected positions along the wire (20) and at which the blades (63, 64) then cut into the sheathing (20b), to controlled depth, the carriage (16) being retractable to pull a cut plug of the sheathing (20b) endwise off the wire (20).
