Abstract (en)

[origin: EP0352176A1] The present invention relates to a locking device for a box with a cover forming, for example, a glove compartment for a motor vehicle. This device essentially comprises two catches (6) fixed respectively to the ends of an elongate support (9) mounted slidably in a guide element (10) fastened to the dashboard of a vehicle and carrying, at one of its ends nearest to the seat of the vehicle driver, a handle (11) capable of driving the elongate support (9) in translational motion in the guide element (10) in order to unlock the cover of a glove compartment mounted in a receptacle made in the vehicle dashboard. This device makes it possible to lock a glove-compartment cover mounted on the dashboard of any saloon car or commercial vehicle. <IMAGE>
