Abstract (en)
[origin: EP0352353A1] The ladle nozzle brick (1) of an opening device for a ladle possesses, according to the invention, an asymmetrical design of the funnel-shaped aperture (4) facing the ladle, as a result of which clogging with sintered filling compound (5) is prevented. The use of oxygen lances, hitherto necessary to break up the sintered filling compound (5), becomes superfluous. <IMAGE>
