Abstract (en)

[origin: JPH0274644A] PURPOSE: To reduce the wear and tear of a guide member by composing the guide member of a gripper so as to be tiltable around parallel axes in a weft inserting direction and fixing the guide member to a sidewall of the gripper body. CONSTITUTION: This weft thread inserting gripper having a guide member 8 for a shuttleless loom is obtained by providing a gripper 1 with a gripper body 1a having a sidewall 2 guided with the guide member 8, fixing the guide member 8 to the sidewall 2 with an elastic clamp 3, filling bores 5 and 6 with the elastic clamp 3, i.e., a material of a rubber clamp, and carrying out the exchange of the worn guide member 8 by cutting the neck part of the elastic clamp 3 and attaching a new guide member to the sidewall 2. The guide member 8 can be tilted in the both directions of arrows 12 and 13. The tilting is performed by using the axis 14' extending nearly parallel to the axis 14 in the longitudinal direction of the gripper body 1a as the center.
