Abstract (en)  
[origin: EP0352430A2] A strip light fitting is described which has a trough-shaped mounting channel of arbitrary length. Lamp holders for individual lamps are arranged at a distance from one another in the longitudinal direction in the interior of the trough-shaped mounting channel. The front side of the mounting channel is sealed by a transparent cover channel. The strip light fitting can be mounted on a horizontal, vertical or inclined wall surface or in a corner on or under plaster. Moreover, it can be combined with a further strip light fitting to form a cornice light fitting, or with a plurality of strip light fittings to form a polygonal column. <IMAGE>
