Abstract (en)
[origin: EP0352569A2] Music therapy has hitherto always acted on the individual by way of the auditory organs. The "consciousness" filter is therefore at all times interconnected. <??>In order to achieve an intensive sound therapy of the body, the invention proposes a lounge underneath which there are arranged electroacoustic transducers for frequencies lying below the audibility limit of the human auditory organ, which electroacoustic transducers treat the patient with sound directly via the tissue. <IMAGE>
