Abstract (en)
[origin: EP0352658A2] The invention relates to a retaining bracket for boards or planks, preferably to be secured vertically, for concrete ceiling coverings, having a board limb 2 oriented approximately orthogonally to a wall limb 3, the wall limb 3 preferably having predetermined breaking recesses arranged at least locally in pairs and opposite each other on longitudinal side edges, and flange-like profiles 5 running parallel to the longitudinal axis of the wall limb. In order to have provided in particular a retaining bracket which can be made from materials other than metal, namely preferably plastic, but at the same time has a sufficient rigidity to the stresses during the ceiling concrete covering operations, the board limb 2, and at least that region of the wall limb directly adjoining the board limb 2, are provided with a ribbing 7 extending beyond the corner region 6 lying between the wall limb 3 and board limb 2. <IMAGE>
