Abstract (en)

[origin: EP0352720A2] The processing chain is assembled from a number of similar baths (B) modular. Each bath has a servo drive, which can be adjusted to regulate the dwell time for the material in that bath. The baths are linked by light-proof couplings. The process line has a material feed module (A), and the different dwell times are regulated by altering the gearing inside each module, that motors of constant speed can be used, or a single drive motor may be used for the whole chain.
