Abstract (en)
[origin: EP0353013A2] A wiping article consists of two porous substrate layers sandwiching surfactant. The surfactant is chosen so that its properties retard its release when the article is wet and squeezed, hence avoiding initial excess foaming and lengthening the number of times that a foaming solution of surfactant can be squeezed from the article. The surfactant is chosen to have a Krafft temperature above 20 DEG C and/or form a liquid crystalline phase at temperatures above its Krafft temperature up to 30 DEG C preferably up to 50 DEG C.
