Abstract (en)

[origin: EP0353194A2] For the adjustment of the transmission rollers (5) and the application rollers (6) and (12) of an inking system and/or damping system of a printing press, two setting elements (13), which can be adjusted via actuators (14), and setting transmitters (16) are arranged in the roller socket (20) of the corresponding adjustable rollers, the setting signals and settings being processed by a memory-programmable control (15). By this means, a simple remote adjustment of the adjustable rollers and an adaptation of the adjustable rollers to the respective type of production are possible. <IMAGE>
