Abstract (en)
[origin: EP0353345A2] The invention relates to a storage container, particularly for the storage of traumatically dislodged teeth, which possesses a container underpart (1) and a lid (2) which can be sealingly connected to the latter. The container underpart (1) is filled with a preserving liquid (3), while a chamber (6), e.g. for the accommodation of dry substance, is formed in the region of the lid and is separated from the liquid (3) by a partition (7) which can be pierced by means of a spike (10) and is intended to receive a nutrient medium. The lid (2) can be deformed in order to pierce the partition (7). <IMAGE>
