Abstract (en)

The present invention relates to a hinge for rapid fixing to profiled elements for casements and the like, which comprises a first hinge body (1) and a second hinge body (2) which can be associated respectively with the fixed frame (3) and with the movable frame (4) and are mutually associable by means of a rotation pin. The peculiarity of the invention resides in that said hinge bodies (1, 2) have a resting foot (10) which can be accommodated in seats (15, 16) defined on the hidden faces of the profiled elements. Locking means can furthermore be inserted along a direction which is substantially parallel to the rotation pin and interact between the resting foot (10) and a portion of the seats (15, 16).
