Abstract (en)
[origin: EP0354556A2] The invention relates to a device for laying stones, particularly for paving stones, curb stones and composite stones or the like, having a front axle (4) which is pivotably mounted on a base frame (6) by an attachment mechanism (12), having a rear axle which is pivotably mounted on the base frame (6) by a rear attachment mechanism (15), and having a jib (8), to the free end of which a laying claw (9) or the like can be attached and which can be moved in a vertical plane. The jib (8) is fixed to an axle (10) which extends coaxially to the front pivot (11) about which the front axle (4) is rotatable relative to the base frame (6) carrying the essential structure and fittings of the laying device. One end of the axle (10) is rigidly linked to the movement of the front axle (4), whereas the other end of the axle (10) is rotatably mounted in a part (7) connected to the base frame (6). <IMAGE>
