Abstract (en)
[origin: EP0354832A1] The invention relates to a projectile launcher with induction control. <??>The guide tubes (1) are made of austenitic stainless steel of high resistivity and transparent to the induction phenomenon, thus making it possible to obtain an optimum mechanical resistance, whilst at the same time benefitting from the advantages of an induction control between an inductor (2) wound on each tube (1) and an armature (3) wound on the projectile (100). <??>The invention is used on all types of ground or airborne rocket launchers. <IMAGE>
