Abstract (en)

[origin: EP0355233A1] The present invention relates to an insulated junction box for mounting in a support of an electrical device. The box is adapted to enclose the device for connecting the electrical device to the electrical supply grid and is characterised in that it is open at its lower end (30) and that, when the box (B) is installed within the support (P), the lower edge (30) of the open end is situated below the lowest part (32) of the lower edge of the inspection trap (T), at a predetermined distance such that the interior of the box is inaccessible manually through the open inspection trap. The invention can be used for a public lighting fitting. <IMAGE>
