Abstract (en)
[origin: US4947529A] An expander for tubular fabric is described having roller arrangements provided left and right in a frame for flat spreading of the tubular fabric, whereby each roller arrangement has a driven drive roller, which bears on the inside of a guide roller around which the tubular fabric is laid. The drive roller in turn is supported by a support roller also arranged on the inside. Thus, a trouble-free transport of the tubular fabric in the expander is assured by the drive roller's position between the guide roller and the support roller.
