Abstract (en)

[origin: WO9002163A1] An aqueous paste contains an alkyl glucoside as a non-ionic tenside and an alpha-sulfofatty acid disalt as an anionic tenside, and possibly a thickening agent, e.g., carboxymethyl cellulose, for adjusting the viscosity. The agent in past form is produced by mixing concentrates aqueous pastes of the tensides and possibly the thickening agent. If necessary, the pH can be adjusted to an approximately neutral value by addition of a regulator. The agents are suitable both for washing textiles and for cleaning hard surfaces, e.g. dishwashing.
