Abstract (en)
[origin: EP0356283A1] - The invention relates to a system for conveying sheet products to a depositing zone of a machine for treating the said sheet products, the said system comprising means (2) for storing the products (3) and a device (5) for transferring the said products one by one from the storage means (2) to the said machine (7). - According to the invention, the said storage means (2) comprise first (8) and second (9) magazines and the said transfer device (5) comprises first (18) and second (19) means for gripping the said products arranged and controlled such that, when one of the gripping means seizes the upper sheet product of the corresponding storage magazine, the other gripping means simultaneously deposits the upper sheet product on the said depositing zone (6) of the machine, the upper sheet product having previously been taken from the other storage magazine and then transferred towards the said machine, and vice versa. <IMAGE>
