Abstract (en)
[origin: EP0356612A1] A refuse container is provided with a hinged lid (4) and with a pick-up apparatus, connected to the container trough (1), for a pick-up claw (6) of a dumping apparatus (8). In order to provide a pick-up apparatus of simple design which can be adapted in a simple manner to pick-up claws of different shapes, the end regions (10) of the legs of a substantially U-shaped stirrup are connected to the mutually opposed regions of the side walls (12) of the container trough (1), the web part of this stirrup, which connects the legs, defining a gap with the front wall of the container trough (1).
