Abstract (en)

[origin: WO9001533A1] A device for program-controlled dosing of washing agents in paste form consists of a cartridge provided with a base plate which can be displaced by application of pressure. The mouth of the cartridge leads to the dispenser of the washing machine, i.e. to the region of a jet or increased turbulence of the water entering the machine. The washing paste consists of nonionic tensides or tenside mixtures which are liquid at temperatures below 10 DEG C in which fine-particle builder salts and washing alkalis are suspended.
