Abstract (en)
[origin: EP0356772A2] The invention relates to an espagnolette with a driver connection slide (14) shiftable by key actuation and/or by a follower (6) and located behind a cover (2) of the housing having a bottom (3) and top (4), and with driver connection pieces (30, 31) arranged in front of the cover (2) and spring-loaded in the closing direction by a compression spring (F), and proposes, in order to achieve a simple design and the best possible mode of actuation, that the driver connection pieces (30, 31) be continued outside the housing in the form of oppositely directed tongues (42, 43) which are parallel to the cover (2) and which, within the compression spring (F), complete one another by overlapping to form a circular cross-section. <IMAGE>
