Abstract (en)

[origin: EP0356829A1] A blow-moulded bottle-shaped container (21) of biaxially-oriented synthetic resin having an integrally-moulded neck (23) at the top of a cylindrical body (22) of the container, there being a pair of inwardly-depressed recesses (24) in the cylindrical wall of the cylindrical body at opposite sides thereof with the minimum spacing between the recesses (24) being at their deepest parts (25) so that a portion of the cylindrical wall between the recesses (24) forms a grip (27) as a result of the recesses, wherein at least one laterally-extending reinforcing rib (28) projects concavely in an arch-shape bent inwards to cross both tapered walls (26) of each of the recesses.
