Abstract (en)

[origin: EP0356850A2] The clip has two dimensionally stable halves (2,3) made of plastic. In the closed position, these are connected to one another in two places (4,7) and form an opening (5) to receive a bag package end. In the first place (7), the connection is formed as a separable predetermined breaking point or cut-off zone. In the second place (4), the connection is formed in such a manner that the two halves (2,3), when the predetermined breaking point or cut-off zone has been separated, are pivotable towards one another for the release or for the reclosing of the bag package end. The clip thus serves as a guarantee closure. <IMAGE>
