Abstract (en)

[origin: EP0357493A2] The present invention relates to a rotary display stand. The aim of the invention is to produce a display stand which makes it possible to present to the public a maximum number of products in a minimum amount of space and which moreover is easy to manoeuvre. This aim is achieved with the aid of a display stand comprising a fixed frame (2) which supports an essentially horizontal shaft (3), which is rotationally mobile and has two supports (10) at its ends and at least one support (10) over its length, the said supports being intended to receive at least two spool-carrying bars (4) which are distributed uniformly around the said shaft (3), the shaft (3) being driven by motive means so as to bring a lower spool-carrying bar (4) to the upper level and vice-versa. This display stand is intended more particularly for products stored on spools such as chains, cables, ribbons and cords. <IMAGE>
