Abstract (en)
[origin: WO8808895A1] Method for operating a machine intended for the dyeing of textile webs, and wherein the fabric to be dyed is passed through the dyeing bath and is wound onto a roller. The instantaneous angular speed of the tractive roller (5) is controlled during the operation of the machine, and said speed is regulated so as to maintain constant or substantially constant the centrifugal acceleration at the point where the fabric winds onto the tractive roller. Application to machines of the Jig type.
