Abstract (en)
[origin: WO8906727A1] A frame is useful for building glass brick walls. Edge sections of the glass bricks rest on support sections of laying pieces mounted on flat strips arranged between the walls. Two parallel U-profiles (12) at a distance apart have a ridge which rests on a base. Each U-profile (12) receives a distance profile (10) on which the edge sections of adjacent glass bricks (14) rest, possibly via intermediate laying pieces. The distance between the U-profiles is approximately equal to the width of the flat strips.
