Abstract (en)
[origin: EP0357990A1] The invention relates to a razor or hair-trimming device consisting of an elongate gripping part 1, at the front end of which a razor blade 2 is arranged and which has a projecting gripping appendage on the opposite side in relation to the cutting edge 3 of the razor blade 2, in the rear region at a distance from the rear end. In order to improve the gripping appendage in the case of the known razor or hair-trimming device and at the same time create in particular a razor or hair-trimming device having good ergonomic properties, it is proposed with the invention that the gripping appendage be designed as a short stub appendage 5 and be arranged fixed in relation to the gripping part 1. <IMAGE>
