Abstract (en)

[origin: EP0357994A2] The invention relates to a frame construction in mullion-transom style, in particular for facades or the like. In frame fields (A), glass panes (3) are fixed on the outside of covering cover profiles (5) by means of the pane edges in accordance with a "normal facade". In neighbouring frame fields (B), glass panes (4) are fixed by means of surround frames (6) bonded to the glass panes (4) in accordance with an "all-glass facade". The transitions between glazing types are particularly simple to produce due to the fact that in the frame fields (B) the glass panes (4) are fixed essentially unchanged, while in the frame fields (A) cover profiles (5a) constructed on one side are provided. <IMAGE>
