Abstract (en)
[origin: EP0358071A2] Colour-photographic silver halide material of the negative type, in which at least one silver halide emulsion layer contains a compound of the formula <IMAGE> adsorbed on the silver halide grain, A being a grain-active adhesion group of the formulae IIa to IIc: <IMAGE> Z is a divalent bridge member, S<*> is a latent fogging agent group which on colour development becomes an active fogging agent (S), and n is 0 or 1, is distinguished by improved sensitivity.
