Abstract (en)  
[origin: JPH02197064A] PURPOSE: To conduct the effective shielding of a coupling case through a simple device by combining a contact blade with a rear plate ensuring the film fitting of the same to a case element. CONSTITUTION: Respective contact blades 5 nearly extend in the relative movement direction of two elements 1 of a case at a point in combination time, and are composed of U-shaped-folded thin plate blades having free end portions 5a whose support is a case supporting itself so as to elastically extrude the effective portions of the contact blades 5 outward when the same touches one side case element. The contact blades are made in such a metal band as the continuing central portion is fixed to a rear plate 7 by for instance, hook fastening, soldering, bonding, or fitting-in. The contact blades are further combined with one plate of rear plate 7 provided with openings through which the same can pass.
