Abstract (en)
[origin: EP0358844A2] A polishing mop for floors and other surfaces consists of an upper and a lower group of nonwoven material. The upper group consists, in turn, of a plurality of nonwoven parts joined together, each having a surface decreasing from top to bottom and each being provided with fringes on the outer edges. The lower group is free from fringes and consists of a plurality of nonwoven surfaces which are of equal size, but are smaller than those of the upper group. The top nonwoven has a central opening and two pockets located opposite each other, into which a reinforcement part is inserted, and the surface of which is equal to that of the lower nonwoven group.
