Abstract (en)

[origin: EP0358862A1] The mast sleeve (1) possesses, for adaptation to different mast diameters, two mutually confronting ends which can be connected at a selected distance from one another by means of a lever device (2) articulated on one end of the mast sleeve. The lever device (2) contains a first lever (7) which is articulated on the outside of the mast sleeve (1) and on which is articulated a further lever (4) carrying at its head end a locking pin (10). The other lateral end of the mast sleeve (1) contains a receiving device (3) with oblique grooves (14, 16), in which the locking pin (10) can be received in the selected position. <IMAGE>
