Abstract (en)
[origin: EP0358920A1] Roller shutters (1) for the exposure and closing of an opening in a building, such as a gateway, a vehicle loading bay or the like, which, in a direction perpendicular to its long side, is guided flexibly and in a manner such as to be movable over a section of its length which is appropriately curved, and which possesses a multi-layered structure (3, 4, 5) when seen in terms of its thickness, in order to combine low-effort flexibility in the direction of the guiding curve with wind-resistant and, in particular, heat-insulating, sound-proofing and/or anti-intruder design.
