Abstract (en)

[origin: EP0358930A1] Light-weight construction panel consisting of a plurality of identical panel modules (1, 2) which are composed, sandwich-like, of two outer cover layers (3, 4) and of a foamed plastic core (5) in between. The butt joints of the panel modules are bridged at least on one side by a clamp (9, 10), the end pieces of which engage in the cover layer of the panel modules. The cover layers (3, 4) of the panel modules consist of a rigid skin, the grooves (14, 15) which accommodate the end pieces of the clamps being formed before foaming. One clamp (9, 10) each is provided in the region of the butt joints both on the front and on the rear of the light-weight construction panel (1). <IMAGE>
