Abstract (en)

The tent is erected by positioning the inflatable structure formed by the tubes (10) on the ground and blowing air under pressure through the valves (14) located at the bottom of the said inflatable structure. The inflatable tubes (10) are provided at a certain height, according to the type of tent, with respective eyelets (13) which may be on top or underneath, allowing the mounting of the waterproof fabric (11) and the tent fabric (12) and the cords (15) for tensioning the fabric (11) after the said structure (10) has been inflated.
