Abstract (en)
[origin: EP0359703A2] The top edge of the upper (4) of the boot is equipped with two lugs (14, 15) which each have an eyelet (16, 17) for the passage of a belt (18) for the fastening of the inner boot (10). This construction is intended to improve the holding of the leg when leaning forward, without limiting comfort. <IMAGE>
