Abstract (en)

[origin: WO8809296A1] This invention relates to a package of a liquid container which stores therein a liquid and whose walls have steam permeability. In order to prevent dewing in the package, a humidity controlling agent is stored together with the liquid container. This agent is produced by wrapping a resin agent having steam absorptivity, water absorptivity and a steam evaporation property, such as an acrylic resin consisting principally of polypotassium acrylate between water/steam permeable sheets. A resin agent which absorbs water in a quantity of 10 to 1,000 cc/g is used.
