Abstract (en)

[origin: EP0360001A1] The invention relates to a device for fixing panels (1,2) to a wall, particularly ceramic panels. The fixing of the panels (1,2) to the horizontal support sections (3) is carried out by means of fixing elements (10) which are fixed to the support section (3) by means of a bayonet-type fastening. The fixing elements (10) are designed in the form of a mushroom and have a foot (9), a web (13) and a head (14). According to the invention, the fixing elements (10) are secured against the danger of twisting in that the panels (1,2) rest with their whole weight on the wider side of the rectangular web (13). The invention is characterised by the simplicity and the economy of assembly and allows the problem-free demounting of individual panels (1,2). <IMAGE>
