Abstract (en)

[origin: EP0360303A2] The present invention is directed to an apparatus for developing and transferring an image comprising an overlaying section having overlaying means for overlaying said thermally developable photosensitive material with an image receiving material; a thermally developing/transferring section having a heating drum for heating the thermally developable photosensitive material and image receiving material overlaid one on another and wound around said heating drum, thereby carrying out development and transfer processes simultaneously.
