Abstract (en)
[origin: EP0360309A1] A mounting system (1) for panels has carriers (2). In a carrier (2) an element (3) is slidable. Carrier (2) and element (3) have legs (4, 5) and (8, 9) respectively with mutually different lengths to allow compact storage of the system (1). Connecting horizontal and vertical carriers (2) is achieved by coupling means in the form of hooks (10), which are provided on ends of the legs (8, 9) and in the form of corresponding longitudinal slots (7), located near corner points of the legs (4, 5). Horizontal and vertical carriers (2) may simply be produced indentially, which make the system (1) universal. The system (1) may simply be assembled and disassembled without the use of bolts, screws and the like.
