Abstract (en)
[origin: WO9003128A1] A camera case (1) consists of a container (3) open on one side, the interior of which can be subdivided, and a lid (5) which closes the interior and is hinged on one side to the container (3). The walls of the container (3) and of the lid (5) are each provided with a water-impermeable plastic layer. The plastic layer on the container (5) is connected in a watertight manner with a first frame (2) which delimits the opening of the container, and the plastic layer on the lid (5) is connected in a watertight manner with a second frame (4) which borders the lid (5). The closure means (24) engage on the frames (2, 4) and in the closed position the frames (2, 4) interlock by means of a combined labyrinth/contact seal.
