Abstract (en)

[origin: EP0360655A1] The invention relates to an apparatus for irradiating a product (22) on both sides. <??>The invention resides in the fact that a sweep of the electron beam (17, 28) is performed during the duration of the pulse in such a manner as to avoid a sweep along the axis of the sweep chamber (12) and that the divergent sweep beam is deflected by electromagnets (18, 19) in such a manner as to obtain a parallel beam. <??>The apparatus is applicable to foodstuff ionisation systems. <IMAGE>
