Abstract (en)

[origin: US5030415A] Ferritic chromium-molybdenum steels containing 26 to 30% chromium 1.8 to 3.0% molybdenum 3.0 to 4.5% nickel carbon< /=0.02% silicon< /=1.00% manganese< /=1.00% sulfur< /=0.015% carbon+nitrogen< /=0.045% niobium> /=12x%C< /=1.2% balance iron and impurities which are due to the melting technology are used as corrosion-resisting material to make structural parts which are resistant to sulfuric acid in a concentration of and above 94% by weight and at a temperature up to the boiling point of the sulfuric acid.
