Abstract (en)  
[origin: EP0361601A2] In a print head for a matrix printer, e.g. needle printer, having an operating head which is rotatably arranged in the end region and has a guide jaw for holding pressure needles extending approximately perpendicularly to the printing direction, a simple design and a reliable mode of operation is obtained in that the cylindrically constructed operating head which receives the guide jaw is mounted in a stop-delimited manner in a central inner bore of the print head by means of a cone seat and is secured by securing means. <IMAGE>
