Abstract (en)  
[origin: WO8809595A1] The invention relates to a rigid container, such as a tank, cistern, or other open or closed vessel, which is intended particularly, but not exclusively, for storing, heating or sustaining the temperature of a fluid, and wherein embodies electrical resistance wires or filaments which can be connected to a current source via electrodes. A significant feature of the invention is that a) the container comprises a layer of material which is electrically conductive and has the commercial designation Semicon CT 6011:70; and in that b) the layer of electrically conductive material has applied externally thereon a layer of good-insulating, fire-resistant material having the commercial designation Isofiber Struktur.
